

QC 080000: Hazardous Substance Process Management Systems

Manufacturers of electrical and electronic products and components now face a myriad of regulations developed to protect consumers from potentially harmful chemicals and substances. To be in compliance with these Environmental Protection directives – such as RoHS, WEEE, REACH, “China RoHS,” California’s Proposition 65, and many others still being developed – manufacturers must conform to strict standards, provide extensive compliance documentation, and ensure that their products do not contain hazardous substances. If manufacturers do not properly plan for these regulations, it can easily translate into added costs and delays – and possibly even fines, imprisonment, loss of revenue, and negative brand impact.

- Our customers include some of the world’s leading brands, major global and local companies and governments
- Operates in more than 100 countries with over 24,000 employees

The Solution

The QC 080000 specification provides a framework for the implementation of a Hazardous Substance Process Management (HSPM) system. QC 080000 introduces a cost-effective process approach to provide record of compliance with both global hazardous substance control directives and customer-specific requirements. What's more, the specification can be integrated seamlessly into any existing quality management system. This will help you ensure that all departments or business units within your organization have a part in controlling hazardous substances.

Intertek is approved by the Electronic Components Certification Board (ECCB) to issue IECQ-recognized certification to QC 080000. We give you more than the proof of compliance and due diligence a third-party certificate provides – we give you an efficient, customized audit process that helps you resolve the challenges of environmental protection.

With our unique “one-stop shop” of management system auditing, supplier auditing, and product certification, Intertek provides hazardous-substance compliance solutions that demonstrate to your customers, employees, and shareholders that your organization is committed to protecting the environment.
